

Job Application for Software Engineer

June 30, 2020

Dear Hiring Manager,

As a young and motivated Computer Security graduate, I am very interested in architecting, designing and developing software that is robust and secure. Thus, I have been focusing on securing software using best security practices. While working in Scotiabank, I have designed and developed a cryptography tool specifically for the Information Security and Control department. Along the path, I have found my passion for crafting software and computer security details. I believe my strength is in being genuinely eager about knowing why something happened and planning to solve problems fundamentally.

Recently, I co-founded an automotive service company and managed to develop a mini ERP and a PWA. My team members will continue with the project. I am, therefore, looking for a full-time position to transition from my current role. Crafting a security tool or architecting secure software both require a combination of computer security knowledge and software development skills. Thus, I think I can be a good fit for the **Software Engineer** role in the software team at **Google**.

I am looking to work with a diverse group of talented professionals to architect, design and develop software that can help make tomorrow better for your customers and my team members while improving my skills and growing in my career. Please review my resume since I believe that my motivation, commitment, and current skills will allow me to fit into your work environment and start supporting **Google**.

Working on the most cutting edge technologies to change and improve how we interact with information, and one another has always been my passion. I look forward to meeting with you and other members of the software team to discuss my suitability for this position further. I can be contacted at (+1) 647-964-1375.

Sincerely,

Ali Niaki
